📍 Amherst, MA

EDUCATION

University of Massachusetts Amherst – Amherst, MA

01/2025 – 12/2026

Master of Science in Computer Science

GPA: 3.88/4.0

Relevant Coursework - Distributed and Operating Systems, Theory and Practice of Software Engineering, Machine Learning, Neural Networks, Data Visualization and Exploration, System Defense and Test

Charotar University of Science and Technology – Anand, India

06/2019 – 05/2023

Bachelor of Technology in Computer Engineering

GPA: 3.79/4.0

Relevant Coursework - Object Oriented Programming, Data Structures and Algorithms, Database Management Systems, Advanced Web Technology, Computer Networks, Information Security, Blockchain

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Python, JavaScript

Frameworks & Development: Spring Framework, Spring Boot, Node.js, Express.js, React.js, REST APIs, GraphQL, HTML, CSS, XML, Full-stack web development

Machine Learning: Supervised Learning, Classification Models, Model Evaluation, Feature Engineering, scikit-learn

Cloud & DevOps: AWS, Docker, CI/CD pipelines, Bash/Shell Scripting

Databases & Tools: SQL (MySQL, PostgreSQL), NoSQL (MongoDB), Linux, JUnit, Git, GitHub, Selenium, Solidity

PROFESSIONAL EXPERIENCE

Thomson Reuters

10/2023 – 12/2024

Associate Software Engineer

Ahmedabad, India

- Built and maintained backend services for the Cleardocs platform using Java (Spring Framework & Hibernate). Implemented 15+ REST APIs and data-persistence layers within an Agile environment, improving feature reliability and maintainability.
- Identified and encrypted sensitive records from a database of over 1 million entries, ensuring compliance with security protocols and data protection standards.
- Resolved 20+ legacy backend issues by analyzing logs and troubleshooting service flows, improving production stability.
- Participated in code reviews and solution reviews to uphold code readability, consistency, documentation and development standards.
- Engineered admin tools and automation using cron jobs to streamline manual processes and reduce recurring tasks that consumed 2+ hours each sprint, thereby improving overall team productivity.
- Wrote unit and integration tests for backend services that improved code coverage to 90–95% and increased system stability.

Thomson Reuters

04/2023 – 10/2023

Technology Intern

Ahmedabad, India

- Developed a guest checkout feature for the Cleardocs platform that enabled thousands of users to complete transactions without account creation and contributed to increased platform revenue after release.
- Investigated and resolved backend defects during development cycles by tracing service requests and identifying root causes in application logs.
- Collaborated with senior engineers during code reviews and Agile sprint meetings, gaining experience with production-level development practices and version control workflows using Git.

PROJECTS

Distributed Stock Bazaar System with Caching, Replication, and Crash Recovery

- Designed and implemented three microservices (front-end, catalog, replicated order service) with multithreaded concurrency via thread pools and socket-based communication, integrating an in-memory LRU cache with invalidation push notifications to reduce read latency and maintain consistency.
- Developed and deployed the system on AWS, implementing a leader-based replication protocol for the order service to enable log-based synchronization, seamless crash recovery, and automatic leader re-election for high availability and fault tolerance.
- Simulated and evaluated system performance under concurrent client workloads and fault conditions, visualizing latency improvements (0–80% trade probabilities) and validating data consistency across replicas during failures.

Spam Email Classification using Machine Learning

- Built a machine learning model to classify emails as spam or non-spam using Natural Language Processing techniques on a dataset of ~5,000 labeled messages.
- Preprocessed text using tokenization, stop-word removal, and TF-IDF vectorization to convert email content into numerical features.
- Trained a Multinomial Naive Bayes classifier using scikit-learn and achieved 94–96% accuracy on the test dataset.

LEADERSHIP

Global AI Hackathon Winner - Thomson Reuters

- Led a team of 6 to win the company-wide Global AI Hackathon by developing an AI-driven solution for product owners.

Peer-Learning Session Conductor - Blockchain and Solidity

- Delivered a peer-learning session on Blockchain and Solidity for 30+ junior students, promoting knowledge sharing within the department.
